

## *HCU Series Official Announcement Letter*

Dear Valued Customer,

We are pleased to introduce the all-new HCU60 model, the latest addition to our HCU Series, designed with your operational needs and feedback in mind. This model, along with several exciting updates to the entire series, delivers enhanced performance, easier maintenance, and a modern aesthetic to elevate your experience with AKG Thermal Systems.

The HCU60 stands out with a newly engineered filter plate, allowing for quick and simple filter changes. This improvement minimizes downtime and streamlines routine maintenance, helping you keep your equipment running efficiently.

For improved equipment monitoring, we have incorporated a larger 5-inch sight glass into the HCU Series. The expanded viewing area offers clearer, more accurate fluid level checks, making inspections faster.

The introduction of a matte black finish across the series provides a more contemporary look.

All HCU series, including the HCU60, are available with your choice of three motor configurations:

- Hydraulic fan drive,
- Brushless DC fan drive
- Brushed DC fan drive

This flexibility empowers you to select the optimal setup for your specific application and performance requirements.

Our team is committed to supporting you as you explore these new features and options. Thank you for your ongoing trust in AKG Thermal Systems—we look forward to advancing your business with the innovative HCU60 and our refreshed HCU Series.
