

Product Discontinuance Notice: CC Series Aftercoolers and AOC8 / AOC15 Combination Units

AKG Thermal Systems, Inc.

Dear Valued Customer,

AKG Thermal Systems is discontinuing the following product families effective **June 30, 2026**:

- **CC Series Compressed Air Aftercoolers**
- **AOC8 and AOC15 Combination Aftercooler / Oil Cooler Units**

Alternative thermal solutions are available; however, replacements may **not be dimensionally interchangeable** with the existing CC Series units.

To support your transition, AKG will continue to stock **limited service parts** for the discontinued products for a period following the discontinuance date. Please contact your AKG representative with your model number to confirm part availability and recommended spare components.

Replacement Options

- The **CR Series compressed air aftercoolers** are available as a next-generation solution for CC Series applications, offering improved cooling performance, enhanced system efficiency, and reduced moisture carryover to protect downstream equipment.
- For AOC8 and AOC15 applications, AKG can evaluate alternative thermal solutions based on your system and operating conditions.

If assistance is needed to identify a suitable replacement or to review recommended service spares for installed units, please contact your AKG representative. Be sure to include your current model number and operating conditions so we can provide the most accurate recommendation.

Thank you for your continued trust in AKG Thermal Systems. We appreciate your business and look forward to supporting you with alternative solutions and ongoing service support.
